

Verm-X does not work in our tests

Author Arne Haugaard Naturhov – Denmark – Monday, 23 November 2009

Following table on page two shows the effect of Verm-x given accordingly with package instructions on Verm-x Sachet to a gelding age 15. Have a look at [VERM-X](#) to see the Verm-x claims.

Egg count has been done using the McMaster method/slides using two Camber slides, one with coloured grid, one with transparent grid. Focus has been on Strongyles but also other eggs were observed and counted. Egg counts have been performed on two horses at different dates and with different egg counts, with similar results as shown in the table, some egg counts have also been done by third parties (veterinarians).

These tests lead to the Conclusion :

I have not been able to see any effect of Verm-x with regard to reduction of eggs in the horse's droppings, thus reduction in parasite load in horses!

Verm-X is at the best –

a harmless way to use money!

Verm-X is when used in good faith at the worst –

a way to have a lot of horses with high egg counts unnoticed and thus the possible damages from high load of internal parasites if one should choose not to treat with chemical dewormers at regular intervals!

Best regards Arne Haugaard
